Thanks Yu-Lien!

I would make one tweak – see the red below.

Subject: Re: Review Request - Response to Comment File for NGS

Hi Lisa,

NGS proposed the following language for the Method 9 opacity reading during excursions (Condition II.N.6.c). Please check if this is acceptable:

"Follow-up actions to excursions during periods of stack saturation shall include determining opacity from the stack, according to 40 CFR Part 60, Appendix A-4, by conducting an opacity test using Method 9 within 24 hours of when the Permittee became aware of the excursion. If opacity cannot be determined within 24 hours using the correct procedures described in Appendix A-4, the permittee shall record the reason opacity could not be determined according to Appendix A-4, and the Method 9 opacity test shall be completed as soon as practicable."

Thank you.

Subject: Review Request - Response to Comment File for NGS

Hi Lisa,

Attached are the revised "response to comment" file and the proposed permit for NGS after incorporating the comments we discussed on 02/08/16 and the additional information you sent on 02/11/16. I understand EPA is still working the languages for the response to Comment #3. While we are waiting for the further information, I thought you could review the rest of the document first to see if I address the comments properly. The parts with changes are highlighted in yellow.

Could you complete your review by 03/04 (Fri)? Let me know if you need more time to complete the review. Thank you very much for your help and have a great weekend!
